

Thermoregulation

Our *Thermoregulation* line provides a cooler more comfortable sleep. With the use of Phase Changing Materials (PCM) cooling technology, *Fryst* fabric regulates mattress temperatures and facilitates crisp sleep conditions. PCMs are chilling molecules that are typically applied to the fabric in the finishing process. They sit on the mattress' top layer and melt from a solid to a liquid state when they come into contact with body heat. This creates a cooling sensation and manages bed temperatures all night long.

Like *Fryst*, our *Serene* collection offers a chilling effect. The yarn used in *Serene* has super conductivity, a form of fiber innovation commonly used in technical textiles. The result is a fabric that is cool to the touch with a unique buttery soft feel. Together these factors make for a truly serene sleep.

Please call our specialist for more information about the fresh and exciting new textiles and our broad range of capabilities.
